

Climate Change and America's Infastructure: Engineering, Social and Policy Challenges

How will climate change affect critical national and urban infrastructures?

Are communities at risk of a climate change related disaster?

January 28-30, 2013
Arizona State University, Tempe, AZ
Cost: \$100 (Student \$50)

Visit: www.regonline.com/climatechangeandinfrastructure

- Gather with government officials, engineers, scientists, and scholars to address climate change and our built environment.
- Discuss adaptation strategies on how to make infrastructure more resilient to climate change and the social and ethical implications of protections for the people who live there.
- Learn about strategies for engaging the public on adaptation challenges.
